CAER - RESEARCH & EDUCATION FACILITY

IN ASSOCIATION WITH WILEY|WILSON

Located in Forest, Virginia, this is a new 30,000 square foot steel and concrete framed building with an aluminum curtainwall and insulated metal panel exterior. The building has exposed structural steel and acoustical metal decking for over 50% of the areas with stained concrete floors. It houses education and research spaces including a high bay area for local universities/colleges and businesses. A 100-foot tall open steel tower structure with a continuous spiral stair is attached to the mail building and serves as a base for communication research. Six research modules, a 2,500 square foot simulation lab and a test facility for Babcock & Wilcox make this a high-tech and cutting-edge facility.
